| Id | Name | Priority | Precondision Steps | Steps | Expected Resault | Status | Pos/ Neg | Coments |
|---|---|---|---|---|---|---|---|---|
| TC1 | Check Registration form UI visible elements according to mockup from the spec (text field, button, checkbox, ext) | 1 | Open web page http://demoqa. com/registration/ | Check all visible UI elements on this page | all elements are ok | PASS | 1 | |
| TC2 | compare the list of countries with the list in the technical documentation | 3 | Open web page http://demoqa. com/registration/ | 1. find a list with name Country 2. click on list 3. compare the list with the list in the technical documentation (there should be 204 country names) | list on web site and list in TD are the same | PASS | 1 | I used automated testing to exclude the human factor and because this test spends a lot of time if tested in a manual |
| TC3 | Correct Registration ( create new user) | 1 | Open web page http://demoqa. com/registration/ | 1. fill a field "first Name" with correct unregistered name 2. fill a field "last Name" with correct unregistered last Name 3 choose hobby reading and click on it 4. write in field "Phone number" - 1234567890 5. Create new unregistered UserName and fill field User Name 6. write in field "Email" new unregistered email 7.create a new password and fill fields - "password" and "confirm password" 8.click submit button | Registration success, opening registration message-Thank you for your registration | PASS | 1 | |
| TC4 | Incorect Registrarion (re-registration of an already registered user) | 2 | Open web page http://demoqa. com/registration/ | 1. - write in field "first name" - TestFirstName 2. - write in field "last name" - TestLastName 3.- choose a hobby - reading 4.- write in field "phone number" - 1234567890 5. - write in field "UserName" - TestUserName12345Testing 6. - write in field "Email" - test@e-mail.com 7.- using a password - TestTest12345 8. and confirm password - TestTest12345 9. - click submit button | print error | PASS | 0 | I used automated testing because it very fast and stability (constancy) if you need do it test again and again many times for each updates |
| TC5 | Verify that the character limit in all the fields (mainly username and FirstName) based on business requirement | 3 | Open web page http://demoqa. com/registration/ | 1. fill in the fields "firstname" "lastname" "UserName" with more than 255 characters (limit of DataBase varChar 255) | line limit exceeded | FAIL | 0 | is it a bug or a feature? |
| -I choose these 5 test cases because I do not see the technical documentation, and I use my common sense to choose this priority. First of all,we need to check whether the user can register or not. Secondly, I checked the full registration and checked that the account was saved and the user can not use re-registration. I do not think my testPlan is the best, but I tried =) | | | | | | | | |
